

Abstract

Method for allocation of a Quality of Service for a packet stream

5

For a service which is provided in at least one communications network KN - preferably an Internet with service classes - which transmits packets PA and/or packet streams ST on a packet-oriented basis as a function of Qualities of Service DG, use NU of the service DI is requested with a controller SF, and this controller SF allocates a Quality of Service DG for the requested use NU as a function of the service DI and/or of the requested use NU of the service DI. A VoIP service implemented in accordance with International Standard H.323 can thus be used with a required Quality of Service.
